

Simplified management and expansion options

For businesses with limited IT budgets but aggressive future growth requirements (users or applications), Dynamic RAID allows instant storage pool growth by mixing and matching different drive sizes and adding or replacing drives at any time

Storage provisioning as capacity needs change

Old storage systems require manual intervention to keep up with expanding capacity needs. The new Dynamic volume features of new NAS devices allow volumes to grow and shrink automatically as needed, while keeping data always available and accessible.

Replication tools for multiple branch locations

Inclusive business grade replication tools offer functionality not found in basic R-sync-based offerings – such as one-to-many and many-to-one replication, bandwidth throttling, scheduling, and encryption over the WAN

Mixed O/S platforms are common in today's networks

A mixture of Windows, UNIX/Linux, and Mac OS can be complex to manage and implement without the right infrastructure. Our solutions offer best-in-class Windows integration including Active Directory, VSS, and VDS, virtual platform support and VMWare ready systems.

Need Secure Data Storage for your Business and Enterprise Customers?

Lan 1 has been distributing data storage for close to 20 years, so you can be confident that we know what we're talking about when it comes to storage. We have a range of storage products from Overland and Iomega that address the key requirements for business storage - SAN, NAS, iSCSI, SAS, Fibre Channel (FC), Tape and Tape Libraries.

- Primary high performance SAN and iSCSI NAS systems
- Secondary storage for cost effective capacity, archives and back-up data
- Desktop NAS expansion storage for security, capacity, archives and mobility
- Tape and Tape Libraries for data security and compliance, archives and off-site storage of critical business data
- Off-Line protection from internal and external data sabotage
- Out-of-the-box integration with Windows, UNIX/Linux, Mac environments
- Storage for virtual environments and database applications
- Support for iSCSI block-level access with Microsoft VSS/VDS integration to simplify management
- Data protection with the advantages of DynamicRAID for easy growth and zero provisioning
- Data replication for one or dozens of locations inc. snapshots for point-in-time recovery

Our products offer out-of-the-box compatibility across multiple platforms
